

DERI-GROPDF-NG-TEST

INTRODUCTION

This is a little test text, created solely for the pupose of testing various aspects of gropdf and a new version of the PDF back-end device.

d

MAIN

Now, let us see if different aspects are working fine, like *italics*, **bold text** and, I think we have already seen code working in the introduction.

Features

There is also a feature, where we can make use of whole blocks of code, like so:

Code Blocks

```
cat deri-gropdf-ng-test.gro | \  
groff -K UTF-8 -mom -Z -Tpdf | \  
/tmp/gropdf-ng > deri-gropdf-ng-test.pdf
```

In the snippet, we can see how to make use of the altered and rewritten perl script.

Side Notes

We can also have supplementary notes, detailing thoughts, the reader might find interesting, but could skip in a first reading session. I call them side notes, but I've read the term margin notes as well.

The idea of iterative reading is an interesting one, I think.

CONCLUSION

So, in summary, everything seems to be fine on the new branch.
