[1] Where two or more injections are required at once, these should ideally be given in different limbs. Where this is not possible, injections in the same limb should be given 2.5cm apart. For more details see Chapters 4 and 11 in the Green Book. All vaccines are given intramuscularly unless stated otherwise.

[2] NB Where a vaccine is manufactured by more than one supplier, it may, on occasion be necessary to substitute an alternative brand.

[3] This is defined as children aged two or three years (but not four years) on 1 September 2013.

[4] The vaccine is given prior to the flu season – usually in September and October.

[5] This vaccination will be introduced during the 2013/14 academic year.

[6] The vaccine supplied will depend on the brands available at the time of ordering.

[7] See individual chapters of the Green Book for clinical risk groups.

[8] See CMO letter of October 2012.
